

Cambio Air-Ten Rotor Conversion Kit

The more stringent demands for bark-free sawmill chips and the sawmills' requirements for increased capacity led Söderhamn to develop a new type of rotor in 1993, the Air-Ten.

All Cambio Debarkers are now supplied with the new Air-Ten rotor design.

In the Air-Ten system the pressure of the debarking tool against the log is achieved by air bags. This system gives several advantages compared with older systems, such as:

- Better Debarking thanks to quicker reaction of the tools
- More gentle treatment of all dimensions of timber, thanks to smoother climbing
- Reduced maintenance
- Better Debarking thanks to quicker reaction of the tools
- More gentle treatment of all dimensions of timber, thanks to smoother climbing
- Reduced maintenance

Example of Air Bag on a Cambio 66 Debarker fitted with AirTen Rotor.

Example of Air Bag on a Cambio 45 Debarker fitted with AirTen Rotor.

The new Air-Ten rotors can be retro-fitted into existing Cambio Debarkers. This can be done easily over a weekend.
